

**St. Cecilia's Public School**  
**Scientia Club Activity**  
**Event: Budding Scientist**  
**Date: 31 July 2025**  
**Grades: VI,VII ,VIII**

Scientia club organized educational and entertaining activity for middle wing students. The activity was aimed to encourage students to connect scientific concepts with everyday life, develop observation skills, and improve their ability to explain science in a simple, engaging way. The students turned into mini scientists presented short demonstrations and explanations based on interesting situations from daily life.

How the arrangement and folding of paper can affect its strength. By cleverly folding and balancing, a simple sheet of paper was able to hold several coins, showing the role of distribution of weight, and structural design. Another participant demonstrated the use of natural indicators like turmeric and hibiscus petals to test substances around us and making chemistry relatable to kitchen and garden experiences. Participants and audience alike learned how science can be observed, tested, and enjoyed beyond the classroom.
