

St. Cecilia's Public School
Mental Maths
Class IX-X

Maths is like going to the gym for your brain, it sharpens your mind.

Regular practice of mathematical concepts enhances students' problem-solving abilities, boosts critical thinking skills, and improves overall academic performance.

A Mental Maths activity was conducted for classes 9 and 10 with class 9 focussing on reciting of squares and class 10 on reciting of cube numbers. The activity focussed on improving students' ability to recite square numbers and cubes.

It began with a brief introduction to the concept, followed by the activity where students were given the opportunity to recite the squares and cubes of various numbers by mentally calculating it. They were frequently encouraged to perform the calculations accurately and quickly.

The activity aimed to enhance their mental maths skills and also boosted their confidence in handling numbers. Students participated enthusiastically, and demonstrated their improved ability to recite the squares and cubes. It provided an interesting and engaging way for students to practise squares and cubes.
