St. Cecilia's Public School
Workshop- 'Messaging Scams and OTP frauds'

Date	**04.11.26**
Classes	**XI,XII**
Topic	**Messaging Scams and OTP Frauds**

As part of the observance of **Cyber Safety Month**, **Geekoz IT Club** organised a Cyber Safety Awareness Workshop on the topic- "Messaging Scams and OTP frauds" for the students of **Classes XI and XII** . The workshop aimed to sensitise students about the growing threats of messaging scams and online frauds and to promote responsible digital practices.

A PowerPoint presentation was used to explain various types of cyber frauds, including fake messages, phishing links, fraudulent offers, impersonation scams, OTP frauds and suspicious messages claiming to be from banks or other trusted organisations. Students were made aware of how cybercriminals manipulate users into sharing personal information, banking details and confidential OTPs.

The presentation also highlighted important preventive measures, such as verifying the authenticity of messages, avoiding unknown links, never sharing OTPs or passwords, enabling two-factor authentication and reporting suspicious activities.

The session emphasised the importance of staying alert and thinking critically before responding to unfamiliar messages or clicking on suspicious links. Students were encouraged to practise safe online behaviour and spread awareness about cyber safety among their peers and family members.

The workshop proved to be an informative and meaningful initiative by Geekoz IT Club towards building awareness about digital threats and fostering a culture of cyber safety and responsible digital citizenship among students.
