Session 2022-23
Banning Single Use Plastic Quiz

Plastic bags and other things made up of single use plastics are a very big threat to the environment. They are mostly made of organic polymers which cannot be broken down by environmental factors easily. Plastic bags are widely used as they are important industrially and are also cheap. However, years of using plastics are now showing their effects on the environment. The piles of non-degradable waste that have been created so far are polluting the air, water, soil, and every other component of nature.

St. Cecilia's Public School conducted a mass quiz on 22.04.2022 on the occasion of Earth day, for all students of Classes VI-XII to make them aware of the harmful impacts caused due to the use of single use plastic. All students participated in the Quiz and further carried the message to their homes and also community level. The aim of the quiz was to send a message to the masses for avoiding or not at all using SUPs as It is high time that we become aware of this menace and contribute towards banning plastic globally. Only then, we will be able to save our earth from choking to death.
